Not currently seeking employment	140	51%	140	51%	85	47%	99	55%	225	50%	239	53%

a Continuing families' values at intake are significantly different (p<.05) than new families' values at intake (based on Pearson chi-square statistic).

b Continuing families' values at outcome are significantly different (p<.05) than new families' values at outcome (based on Pearson chi-square statistic).

c Intake values are significantly different (p<.05) than outcome values within the category (based on paired t-test).

d Participants were not asked this question until the 1999-2000 program year.
